THE grand distinctive feature of this work is indicated in the title-page. It is a *pronouncing* dictionary, that is to say, it contains the pronunciation as well as the meanings of each word. This circumstance adds much to its utility, especially for the numerous class of self-educating students who do not enjoy the benefit of oral instruction from a native of Germany. To such persons, and to others also, it is a great advantage to see the correct pronunciation of every word at a glance, without having to stop to think, or being in any danger of mistake. On the other hand, it is evidently a matter of great difficulty, if not absolute impossibility, to convey to an English reader by the use of English letters, a perfectly accurate notion of the true sound of German words. Moreover there are great differences, even among well-educated Germans, as to the pronunciation of their own language. Hence it might appear useless to give any directions for pronunciation. And so it would be, if absolute perfection were required, or if the differences of pronunciation among Germans were such as to prevent them from understanding each other. But all that the English student of German really requires, or can reasonably hope to accomplish, is to be able to pronounce the language in such a way as to make himself understood by natives; and thus he may attain by the use of the present dictionary. The system of pronunciation here adopted, however open to question in some quarters, has been found by experience to answer every practical purpose that can be desired.

Full directions as to the use of the system are given in the pages that immediately follow, but a word or two on the marks of accentuation may be useful. It is unnecessary to remark that where only one accent is employed, the syllable upon which it is placed should receive the whole stress of the voice.

Where two syllables in a word are accented, that upon which the double accent is placed should receive the chief stress, and the other a less prominent emphasis. We may give as examples of this subordinate accent the first syllable in the words, *indispensable*, *supernumerary*, *contradiction*, and others of a similar class.

While the insertion of the pronunciation constitutes a leading feature in this dictionary, it has other excellencies which ought not to be passed over in silence. The aim of the Editor has been, to make it as practically useful as possible to persons of all classes, and at the same time as complete as the limits of the work would allow. Hence he has omitted many words—such as those that are now rarely used, or are easily understood by an Englishman from their similarity to the corresponding English words, or the simplicity of their formation from other German words explained in the dictionary—while, on the other hand, he has thus managed to supply the reader with a rich store of idiomatic phrases which embody the genius of the language, and many of which could not be understood by one who merely knew the signification of each component word. Various technical terms relating to commerce, science, the arts &c., have also been inserted, all of them being adapted to the present advanced state of knowledge and civilisation.

## DIRECTIONS FOR PRONUNCIATION.

PRONOUNCE every syllable as if it were English.

At the end of the syllable the vowel is invariably long. Before one consonant or more it is short, if in the latter position the long sound is required, and there is no other means of indicating it with certainty, *â* is changed into *âh*, and *i*, *o*, *ô*, *u*, into *i'*, *o'*, *ô'*, *u'*.

Where the usual short sound before a consonant is required, but where the syllable would be long in English, or might be either long or short, a *breve* has been placed over the vowel to guard against all mistakes. Thus *fin't* will rhyme with *nint*, whilst *fin't* will rhyme with *pint*; *pöst* rhymes with *coſt*, but *mo'st* with *hoſt*.

*â* as *a*, . . . . in father, when at the end of a syllable; before a consonant shorter, as in cart.

*âh* as *a*, . . . in ear, before a consonant.

*ai*, . . . . when under the accent, long and open, as *ai* in hair, *paul*; when unaccented, like *ey* in the noun survey.

*ey*, . . . . long and close, as in obey and the verb to survey, never like *ce* as in key.

*e*, . . . like *e* in met, men, mess, elm.

*e'*, . . . as *ce* in bee.

*i*, or *i'*, . . . long, as *i* in pine, or *y* in my.

*i* or *i'*, . . . short, as *i* in pin, bit.

*o* or *o'*, . . . long, like *o* in no, most.

*o* or *ô*, . . . short, between *o* in not and *u* in nut; see Explanation below.

*ô* or *o'*, . . . short and long, has no corresponding sound; see Explanation below.

*oi*, . . . like *oy* in boy, or *oi* in toil.

*ou*, *ow*, . . . like *ou* in pound, or *ow* in now.

*oo*, . . . long, like *oo* in too, boot, noon.

*öö*, . . . short, like *öö* in foot, or *u* in put, pull, bush.

*û* or *ü'*, . . . short and long, like the French *u*; it has no corresponding sound in English; see Explanation below.

There are but three vowel sounds in German which have no exact parallels in English. The student who has no opportunity of learning these sounds from a native, will, by attending to the following directions, pronounce them without much difficulty.

To pronounce the long sound of *ô* (*œ*), first pronounce a long *o*, and without changing the position of the organs, try to pronounce the *ey* in obey; the latter will be the correct sound.

For the short sound of *ô* (*œ*), place the organs as before, and with that position, try to pronounce the syllables *of*, *el*, *eck*, *em*, *en*, *ep*, *err*, *ess*, &c.

To obtain the long sound of *û* (*ur*), pronounce the *oo* in the word *oozy*, retain this position of the organs and then try to pronounce the *ee* in *eel*.

For the short sound of *u* (*ur*), place the organs in the same position and try to pronounce the syllables *if*, *ill*, *ick*, *im*, *in*, *ip*, *irr*, *iss*, &c.

The short *o* in German is the pure sound of *o* in most when shortened; in English the short sound of the letter *o* is pronounced as the short sound of *aw* or *au*; thus *not* is the short sound of *naught*, and *not* of *note*; the English short *o* commences with the mouth open, as in *on*, *off*, *odd*; to pronounce the German sound correctly, the mouth ought to be nearly closed.

Care should be taken to pronounce the short vowels before *r* not as in the English words, *her*, *fir*, *wood*, *cur*, but as in the words *terror*, *spirit*, *horror*, and *u* as in *full*.

In the French words, which retain the French pronunciation, the nasal *n* is represented by *n* and *ng*, and *j* by *zh* the sound of *s* in pleasure.

All the German consonant-sounds can be represented by English characters with the exception of the *ch*. The sound is indicated by *ch*, it lies between *k* and *g*. The position of the organs is the same as when pronouncing these, but the breath is expelled more slowly than in pronouncing *k*, whereas in pronouncing *g* the breath is drawn in. The Scots have the same sound in the word *loch*, and the Spaniards in the word *Mexico*.

The gh represents the hard sound of g before e and i as in get, gimlet.

The syllable which is to be pronounced most forcibly, is marked with an accent. Compound words have generally two accents, the primary or stronger is marked by ' , and the secondary or weaker by ' .

The r must be sounded somewhat stronger than in English, more like rr.

S has the hard sound of s in so; z, the soft sound, as in rising.

The possessive case of the nouns is marked immediately after the gender; when the plural does not differ from the singular, it is marked by a -. Where neither case nor number is given, the possessive is like the nominative, and the word has no plural.

When the neuter or intransitive verb is conjugated with the auxiliary verb sein, it is indicated by "aux. f." when with haben and sein, by "aux. h. & f." Where no auxiliary

verb is given, it is conjugated with haben only.

Although the soft letters b, d, t, g, s, are pronounced like their corresponding hard sounds at the ends of the syllables, yet as soon as, in the formation of the plural number or any of the oblique cases, a syllable is added to the word, the soft letter, which is no longer at the end of the syllable, but at the beginning of a new one, regains its soft sound. Thus *Leb* is pronounced *lope*, but the *genitive Lobes* is pronounced *lo'-bes*; *hant*, *hönt*, *gen. hantet*, *hönt'-dess*, *Tag*, *tähq*, *pl. Tage*, *tä'-gai*.

In a few cases the correct division of words into syllables has been sacrificed to obtain a more accurate pronunciation: thus, *tenen*, *tenung*, should be divided *ten'-ken*, *ten'-könk*; but as the pronunciation would be inaccurate, it has been divided *tenk'-en*, *tenk'-önk*.
